

## DCII Shared Drive for Documents Information

A Shared Drive has been established on the ISO server for storing DCII documents. The following documents are currently stored on the shared drive: SQA files needed for assessment purposes (i.e. documents from the Integrated Review meetings); information on the distributed Designer 2000 Patches; Integrated Functions spreadsheets, the GUI Standard Designer Templates and documentation; the Shared Drive Access Request form; Repository application and user access request forms; Testing documents; briefing charts; Designer 2000 Lessons Learned files; and working/draft copies of procedures, plans, and standards; and DCII technical instructions.

Most of these documents are generated at the design, development, implementation, and enterprise testing phases of the project and need to be available for assessments and reviews (draft documents). The GUI templates are required by developers developing client/server screens.
